Attention to Details, Communication, Adaptability,
Team Collaboration, Time Management,
Continuous Learning

About Me

Full Stack developer with extensive experience creating comprehensive web applications and internal services. Proficient in developing robust, scalable systems, automating business processes, and implementing comprehensive DevOps practices. Specialized in building everything from server-side APIs and CI/CD pipelines to desktop applications and bot frameworks.

Skills

Experience

KupiSalon

July 2024 - December 2025

Fullstack Developer

Development of internal services and automation tools for the auto detailing business.

- Corporate CRM system: Conducted reengineering of legacy CRM — rewrote backend on Node.js, transitioning from monolith to modular architecture. Implemented sales funnel module with automation and dashboards for management, reducing lead processing time and increasing process transparency. Automated routine operations — integrated CRM with email (IMAP/SMTP), calendar and telephony, added notification system (in-app, email) and RBAC. This reduced the number of manual operations by managers and accelerated business processes.
- Partner Portal: Created a customer attraction channel — developed a partner portal with personal account, analytics (conversion, revenue) and commission settlement system. CRM integration ensured real-time data synchronization. Automated document flow — implemented generation of partner agreements and acts in PDF, along with an admin panel for moderation and bonus programs. Result: growth in active partners and company turnover.
- Referral Program: Launched a user base growth system — designed referral system architecture (link generation, source tracking, multi-level rewards) from scratch. Implemented a referrer personal account with statistics. Result: growth in user base and conversion of referred users. Ensured flexibility and manageability — configured admin panel for managing rules (limits, bonus deadlines) and notification system. Result: growth in user base and conversion of referred users.
- Content Maker: Accelerated content makers 3x — developed SaaS application with AI text generation (GPT), template library and publishing scheduler for Telegram, VK, Instagram, LinkedIn and YouTube. Added analytics and quality control — implemented editor with preview, multilingual support and publication effectiveness tracking (reach, engagement) per platform.

IT_One

January 2021 - January 2023

Fullstack Developer

Full-stack development, DevOps, CI/CD, performance optimization, and team mentorship for a large IT company.

- CI/CD & Infrastructure — Implemented GitLab CI pipelines for 5+ microservices, reducing release time from 2 hours to 15 minutes.

Automated deployment via Helm charts, eliminating 90% of manual errors. Configured auto-scaling based on CPU/RPS metrics in Kubernetes, reducing costs by 30% during low-load periods.

- Testing & Quality Assurance — Introduced automated smoke tests (Postman Collection Runner) in CI/CD before each deployment and regression testing, reducing production defects by 60%. Set up a Postman mock server for isolated frontend work, reducing team downtime by 40%.
 - Backend & Data — Implemented Redis caching, reducing average API response time from 450ms to 80ms. Optimized 15+ SQL queries in PostgreSQL (response time reduced from 2s to 50ms). Integrated Kafka for async communication, handling 10K+ messages per minute. Developed REST API for 3+ services (JWT, OpenAPI).
 - Frontend & Performance — Migrated SPA from Webpack to Vite, reducing build time from 45 to 8 seconds. Introduced mobile-first approach, improving Core Web Vitals (LCP, CLS) by 35%.
 - Processes & Team — Mentored 2 junior developers and created a technical documentation base (Runbooks, ADRs), reducing onboarding time for new specialists from 3 weeks to 1 day. Set up Grafana dashboards, reducing mean time to incident detection from 30 minutes to 2 minutes.
-

RetailCRM

January 2020 - December 2020

Frontend Developer

Frontend development for a SaaS platform serving 3,000+ retail clients. Migrated legacy jQuery codebase to a modern stack, built reusable component library, and integrated REST APIs.

- Legacy Migration — Migrated 40+ jQuery pages to a Vue.js + Vuex stack, reducing average page weight from 1.2 MB to 280 KB and improving Time-to-Interactive from 4.5s to 1.6s. Wrote a codemod script to automate repetitive refactoring across the codebase.
- Component Library — Designed and shipped 25+ reusable Vue components (tables, modals, form fields) with Storybook documentation, cutting duplicate UI code by ~60% and unifying the look across 3 product modules.
- API Integration — Built a typed REST client with auto-generated TypeScript models from OpenAPI specs, replacing ad-hoc fetch calls and catching 30+ contract mismatches at compile time before they reached QA.
